• Oleksiy Al-Saadi taught the bulk of this classes coding, and was an amazing teacher overall. Each in class lecture was very understandable, and helped me thoroughly understand the topic at a surprising pace. Despite this class being condensed, the quality instruction and the materials given made learning the language in this time very manageable, and while it certainly took a lot of time dedicated out of class, I never felt stressed about understanding a concept because I benefit so much from the in class sessions and homework. (I.E. The class certainly took a lot of work, but if the work was put in, the topics never felt impossible or poorly taught.) Oleksiy Al-Saadi's area of research is incredibly complex, and from what I read, downright incomprehensible to someone with my background. However, throughout the entire course, there was no point where I felt that Oleksiy Al-Saadi's explanations were excessively difficult. I came into this class with almost no coding experience, yet with only putting in the time to study and practice, I had no issues understanding the material. Anything that was confusing in class was always cleared up once we received time to work on the assignment, as some things are just naturally confusing before actually working with them. Outside of the coursework in class, Oleksiy Al-Saadi seemed enthusiastic about answering side questions that weren't directly related to the projects at hand. For example, Oleksiy Al-Saadi answered many questions about more advanced programming topics, and also helped me set up some software on my computer so I could make my programs look nicer (with extra modules and colors), which was not a requirement at that point. He also helped me get setup with a cool custom-colored VIM UI as well as taught me all of the main shortcuts and setup instructions, which made making programs easier and more fun. Oleksiy Al-Saadi also used regular puzzle problems to help encourage a good mindset while making computer programs. These were difficult, but overall very applicable and useful for setting up out methods to make code that solves problems. Overall Oleksiy Al-Saadi seemed genuinely interested and knowledgeable about the topic, and was able to make the class clear and fun to be at. 10/10 teacher, honestly couldn't have expected the class to go any better.

• This was something that Oleksiy Al-Saadi said himself, but the class could benefit from a time set aside to prep people for some of the software to get started coding. Things like practice with text editors and where to download them would be very helpful for making sure everyone can easily get started with preparing to code. It was not a huge issue though, he helped a lot with VIM individually and many students found IDEs and modules without a problem.
